

# REQUIREMENTS GATHERING

## ➤ **Interview**

This entail having planned discussions with a single person at a time during which you ask predetermined questions and take notes on their responses. Give a brief introduction of yourself and the purpose of the interview before you start. In order to establish a rapport with the person, you can also give them time to introduce themselves. This is crucial to establish a positive atmosphere and guarantee their cooperation throughout the procedure. For a meeting that is both fruitful and insightful, prepare your questions in advance.

## ➤ **Questionnaire**

A questionnaire or survey is a set of predetermined questions designed to elicit information about a particular topic. It's a useful method for gaining insights quickly from a large group of people. Surveys enable you to collect data from people wherever they are and are also inexpensive. Because of this, it is a widely used technique for gathering requirements. However, surveys might not be the best tool for analyzing complex issues.
